Steps to Create a Dynamic Web Project

1. Go to **File** > **New** > **Dynamic Web Project**.
2. Enter a **Project Name** of your choice.
3. Click on **Next**.
4. Click on **New runtime** > **Apache** > choose **Apache Tomcat v9.0** > **Next**.
5. Browse to the **Tomcat installation folder** and click **Finish**.
6. Select **Dynamic Web Module Version 3.1** > **Next**.
7. Edit the **folder name** to `src`.
8. Set **build/classes** in the **Default Output Folder** section > **Next**.
9. Set **WebContent** in the **Content Directory** section.
10. Check the box for **Generate web.xml deployment descriptor**.
11. Click **Finish**.
